

At *Pad Print Machinery of Vermont*
we have a saying –
We don't sell machines, we sell solutions.

We discovered long ago that many customers' printing needs are unique. And what sets us apart from our competitors are our sales and engineering teams who can:

- assess your printing challenges
and
- partner with you to find a creative solution.

With a full complement of pad printers to choose from, our team has designed many custom solutions for a variety of applications.

Whether it is adding a rotary table, custom fixtures (see *Figure 1*), using robotics, on/off loading automation for in-line production, each one could make all the different in your output and bottom line.

We take the time, we develop relationships and we partner with you to design a printing system based upon your requirements.

Here at **Pad Print Machinery of Vermont** we call it **"Engineered Printing Solutions"** - because we like working smarter, not harder.

Check out the **"Custom Solutions"** section for additional information.

Figure 1: A standard KP08 with a programmable custom fixture. The part rotates and the pads shuttle to print separate images on both sides. Safety features include thumb switches to ensure operator is clear of any moving part during the print cycle.
